DETAILED ACTION

Response to Amendment

1. Acknowledgment is made of applicant's Amendment, filed October 25, 2010.
The changes and remarks disclosed therein were considered.
2. Claims 1-12 and 21 have been canceled.
3. Claims 24-31 are newly added.
4. Claims 13-20 and 22-31 are pending in the application.

Response to Argument

5. Applicant's arguments filed on October 25, 2010 with respect to the rejection of Komori have been fully considered and are persuasive (see pages 9-14 of an amendment filed 10/25/2010). The rejection of Komori has been withdrawn.

Allowable Subject Matter

6. Claims 13-20 and 22-31 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Komori and Tanizaki et al taken individually or in combination do not teach the claimed invention having the following limitations, in combination with the remaining claimed limitations:

As in claim 13: **"a plurality of data line at least a portion of the data lines being assigned at least one element that can be switched between two states with different discrete resistances by mean of which element the data line is enable or inhibited depending on the switch state, it being possible for the switching state**

Art Unit: 2824

of the element to be stored in nonvolatile fashion and to be changed over rapidly”

in a component with a logic circuit arrangement with configurable functionality as claimed in the independent claim 13. Claims 14-20 and 22-23 are also allowed because of their dependency on claim 13; or

As in claim 24: **“a plurality of data lines at least a portion of the data lines being assigned an element that can be switched between two states with different discrete resistances, by means of which element the data lines are enabled or inhibited depending on the switched state of the element wherein the switching state of the element is stored in nonvolatile fashion”** in a component with a logic circuit arrangement with configurable functionality as claimed in the independent claim 24. Claims 25 and 28-31 are also allowed because of their dependency on claim 24; or

As in claim 26: **“a plurality of data lines; at least a portion of the data lines being assigned two elements that can be switched between two states with different discrete resistances, by means of which two elements the data lines are enabled or inhibited depending on the switched state of the element wherein the switching state of the two elements is stored in nonvolatile fashion”** in a component with a logic circuit arrangement with configurable functionality as claimed in the independent claim 26. Claim 27 is also allowed because of its dependency on claim 26.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled
